KEY RISKS

5. What are the key risks associated with this product?

General risks of investing in a unit trust fund :	
Market risk	This risk refers to fluctuations in the market due to changes and developments in the economic climate, political stability and technology of the country. This risk can be reduced by investing in a well-diversified portfolio of securities from the different market sectors.
Loan financing risk	This risk occurs when you take a loan/financing to finance your investment. The inherent risk of investing with borrowed money includes you being unable to service the loan repayments. In the event units are used as collateral, you may be required to top-up your existing instalment if the prices of units fall below a certain level due to market conditions. Failing which, the units may be sold at a lower net asset value per unit as compared to the net asset value per unit at the point of purchase towards settling the loan.
Liquidity risk	This risk refers to the ease of converting an investment into cash without incurring an overly significant loss in value. If a unit trust fund has a large portfolio of stocks issued by smaller companies, the relatively less liquid nature of those stocks can cause the value of the fund to drop. This is because there are generally less ready buyers of such stocks as compared with the stocks of larger and more established companies. This risk is managed by taking greater care in stock selection and diversification.
Management company risk	This risk arises when the Manager does not adhere to the investment mandate of a fund. However, this risk is greatly reduced by the presence of the fund's Trustee, whose duty is to ensure that the fund's investment mandate is complied with. Poor management of the Manager may jeopardise the unit trust fund's performance.
Non-compliance risk	This risk refers to a lack of fiduciary duty on the part of the management company to ensure compliance with laws, rules and regulations, internal policies and procedures or work ethics standards to the best interest of the Unit holders. In order to mitigate this risk, a dedicated compliance unit and effective compliance procedures should be implemented and monitored to ensure the management company and its fund manager comply with the relevant laws and guidelines at all times.
Inflation risk	This is the risk that investors' investment in the unit trust fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.
Specific risks of the Fund:	
Credit/Default risk	This will arise when the borrower or issuer of money market instruments or other fixed income securities default on its obligations to pay interest/profit and repay the principal amount borrowed. This may cause the value of the Fund to be affected. To mitigate this risk the fund manager will set limits to each exposure and will regularly monitor the credit worthiness of the company they invest in.
Interest Rate risk	This risk, which is related to a drop in the price of money market instruments and other fixed income securities when interest rate rises and vice-versa, will have an impact on the NAV or unit prices. The magnitude of the drop in price is normally greater for longer-term securities rather than shorter-term securities as they are more sensitive to interest rate changes. To mitigate this risk, the fund manager will monitor the duration structure of the fixed income portfolio.
Liquidity risk	This risk is normally associated with low volume of trade, as some investments are not as liquid as deposits, making it difficult to dispose off at a desired price. Should an investment become illiquid, it may be sold at a discount to its fair value, causing the NAV to fall. This risk is more pertinent for investments in smaller companies, as there are relatively less ready buyers of such stocks/shares compared with bigger and more established companies. To mitigate this risk, the fund manager will exercise care in selecting the right mix of stocks/shares.

Investors are reminded that the risks listed above may not be exhaustive and if necessary, they should consult their adviser(s), e.g. their bankers, lawyers, stockbrokers or independent professional advisers for a better understanding of the risks.

Note: If a Unit Holder's investments are made through an institutional unit trust adviser ("Distributor") which adopts the nominee system of ownership, he would not be deemed to be a Unit holder under the Deed and as a result, his rights as an investor may be limited. Accordingly, the Manager will only recognise the Distributor as a Unit holder of the Fund and the Distributor shall be entitled to all the rights conferred to it under the Deed.

VALUATIONS AND EXITING FROM INVESTMENT

8. How often are valuations available?

The Fund must be valued at least once every Business Day. The valuation point for the NAV per Unit of the Fund, based on the valuation of the Fund's investments, assets and properties is performed at the end of a Business Day upon closing of the Bursa Malaysia.

Note: Valuation point is the particular point in time on a Business Day, as the Manager may decide, at which the NAV of the Fund is calculated.

9. How can I exit from this investment and what are the risks and costs involved?

To exit from this investment, you may redeem from the Fund, switch out of the Fund or transfer your unit holdings to other investors. Please refer to the "Fees & Charges" and "Transaction Information" sections for details on switching and transfer facility.

Redemptions can be made from the Fund by completing a transaction form and sending it to the Manager's business office, marketing representatives, independent tied-agents appointed by the Manager with valid authorisation cards issued by the FIMM or any institutional agents appointed by the Manager and who is a member of the FIMM. There is no restriction on the frequency of redemption. The amount that you will receive is calculated by the redemption value. That amount will be paid in Ringgit Malaysia within ten (10) calendar days. Any applicable bank charges and other bank fees incurred as a result of a redemption by way of telegraphic transfer, bank cheque or other special payment method will be charged to you.

The Fund registered a return of 2.49% against the benchmark, MBB Overnight Rate which registered a return of 1.92% for the financial year under review. The fund outperformed the benchmark by 0.57% and returned 33.79% since its inception on 25 July 2007, thereby achieving its objective of providing reasonable return.

Basis of calculation and assumptions made in calculating returns are as follows:

$$\text{Percentage Growth} = \frac{\text{NAV}_T - \text{NAV}_{T-1}}{\text{NAV}_{T-1}} \times 100$$

Where,

NAV_T = NAV Price at the end of the period
NAV_{T-1} = NAV Price at the beginning of the period
Total No of Periods = The number of days in the duration of calculation

$$\text{Average total return} = \frac{\text{Total returns of the years under review}}{\text{Number of years under review}}$$
